Infrastructure

Understand your IT infrastructure set up

Our IT Infrastructure services can provide a tailored IT solution for your business. Our flexible approach allows us to build out bespoke packages that fit your specific needs. What's more, our transformation experts will work with you to determine the exact requirements your business has across your whole organisation, and design and implement cloud based infrastructure that provides a scalable and secure solution.

Our goal is to support the design, implementation and operation of your IT infrastructure from data centre to device and to help IT teams deliver improvements through increased agility, flexibility, reliability and to also help reduce Total Cost of Ownership (TCO).

What IT infrastructure management can do for you

> **Increase capacity** by cutting out maintenance tasks

> **Maintain smooth-running** communication platforms for clients and colleagues

> **Backup information** in case of data loss

> **Lower the risk** of cyber attacks and data theft

Benefits of an effective IT infrastructure strategy

> **Highly secure data**, as a result of increased measures and reliable firewalls to deter cyber attacks

> **Improve efficiency** by cutting out server maintenance tasks – adopt cloud computing

> **Better business communication** for clients and colleagues with smooth, reliable collaboration systems

> **IT management will cut down costs** by adopting cloud – no more money spent on servers and hardware

Why choose Intercity for your IT infrastructure management

At Intercity, we will ensure that every aspect of your IT infrastructure strategy is put in place professionally. We believe that saving your business money and making day to day work easier to manage is extremely important.

Not only will a successful network infrastructure management strategy make work easier to handle by removing the stress of managing security measures and hardware maintenance, it will also make you and your team more efficient and increase productivity.

Our 4 step approach to delivering your infrastructure

1. Understand your setup

2. Determine business requirements

3. Design and implement Cloud Infrastructure

4. Implement a scalable network
