DESIGN > INSTALL > MAINTAIN

About Weblight

Weblight is the UK's largest independent lighting solutions provider. Part of specialist lighting group, DW Group Holdings Limited, Weblight has over 20 years experience of providing energy efficient lighting design, installation and maintenance

The Problem

In order to service its customers, the company operates on both a national and regional basis and until 2012 had a network of five stockholding branches across the UK - each with its own PBX solution - plus a fleet of over 100 vehicles, still operating nationally, all fully stocked and fitted with GPS tracking.

With calls between sites costing approx. £400 per month, Weblight's IT Manager Trevor Wright, had considered Voice over IP (VOIP) as an alternative solution to the disparate branch-based PBX telephone systems on a number of occasions, but the cost of hardware and installation across all the sites was always prohibitively expensive.

In 2011 Weblight began to experience change in its business that meant that the physical branch infrastructure across the UK was less critical and business functions gradually began to be centralised back into Head Office. In particular, the need for large volume lamp storage and stockholding at each branch had reduced dramatically, primarily due to technological advances in longer life lamps and LED technologies.

solutions to the Retail, Healthcare, Education, Commercial, Manufacturing, Transport & Logistics and Hospitality & Leisure sectors, whilst also working in partnership with many Facilities Management companies.

The Solution

The decision was taken to reduce the number of branches and to implement a cloud-based IP Telephony solution from Intercity Technology to connect Head Office, the remaining branches, home workers and the mobile field and sales staff. With no hardware maintenance costs and all internal 'on-net' calls now being free of charge, the result was a dramatically reduced billing cost with total savings of around £12,000 per annum. External calls are routed seamlessly via local geographic numbers, so customers do not need to be aware when their calls are being re-routed. In addition to the high definition, seamless call routing, the cloud IP telephony solution also provides video conferencing facilities for meetings.

Weblight had an existing MPLS network with Intercity Technology, so the IP telephony project followed on from the MPLS solution, forming part of Weblight's overall IT consolidation. The network was upgraded, with no issues, to support the VOIP solution. It runs over a fiber connection into the Head Office site and ASDL lines for the remaining branch office and home workers. 'It all works extremely well and for a very reasonable cost' said Trevor Wright.

All office-based users and home workers were provided with Polycom handsets that automatically boot up with their profile once plugged into the

““The Intercity Technology hosted VOIP solution and video conferencing capability provided a higher quality and lower cost solution than the stand alone systems and that, added to the fact that there were no installation or maintenance costs, made the decision to implement it an easy one””

Weblight

network. The system features a single central short-code dialling directory, voicemail, a number of virtual audio conference rooms and three-way conferencing, from every desk phone. The voice quality of the Polycom HD (high definition) solution was a major plus point feature for Weblight. They trialled two systems - HD and non-HD and the difference in the quality was, in Trevor Wright's words 'amazing'.

The Cloud Communications services provided by Intercity Technology has given Weblight a flexible infrastructure that is managed end-to-end by an experienced and committed team. The service is supported by a 24-hour support desk and customised portal that gives them a wealth of real-time and historical data.

Key successes

- 1 No hardware maintenance costs
- 2 Internal on-net calls free of charge
- 3 Total savings of around £12,000 per annum
- 4 High definition, seamless call routing
- 5 24-hour support desk and customised portal

About Intercity Technology

At Intercity Technology we believe in a people first approach to define and launch technology solutions.

We have over 30 years' experience in delivering services that allow you to work together, work securely and work from anywhere on a global basis.

With a genuine passion for technology and the businesses we work with, we offer innovative technologies in cloud, enterprise mobility, collaboration, security and managed services.

Intercity is accredited by a number of professional organisations with a suite of accreditations which confirms and evidences our commitment to security, quality, service management and environmental management. For a full list of our accreditations and frameworks please visit [intercity.technology/accreditations](https://www.intercitytechnology.com/accreditations)
